

Python Problems for Skywalker Aryan

Jan 10, 2015

Create a program called **rectangle.py**. It takes two numbers as user input, and prints an ASCII rectangle. Sample run:

```
$python3 rectangle.py
Enter width: 3
Enter height: 4
```

```
***
***
***
***
```

Write a program called **countdown.py**. It takes any number as input, starts counting down to zero, and ends with a BOOM. Sample run:

```
$python3 countdown.py
Enter number: 11
```

```
11
10
...
0
BOOM!
```
